

A SMART WASTE MANAGEMENT FOR METROPOLITANS CITIES

ARCHITECTURE OF SWMM

GAIN:

Timely and efficient way of collecting waste leads to better health, hygiene, and disposal. The system provides shortest path to the location of waste bins. So the collectors can plan a better and fuel efficient route.

Waste management is linked to different stakeholders, including recyclers, food industry, healthcare, research, environment protection

PAIN:

Lack of finance, training, leadership, lack of proper planning implementation of solid waste is found poor.
